The Mapping Report View

Forecast Pro Views · https://dev.forecastpro.com/documentation/forecast-pro-trac/forecast-pro-views/the-mapping-report-view/

> Forecast Pro TRAC only

The Mapping Report includes a record of how, when and by whom every mapped history in your project was created. Please consult Working with Product Mapping and Mapped History for more details.

To open the Mapping Report, click the **Mapping Report** icon on the **Reports** tab.

Product Mapping

By default, the Mapping Report includes the columns shown above.

In the example shown, the first four columns show the attributes for the *Map to* items. The number of columns will depend on the number of attributes you have in your hierarchy.

The column labeled *Map from* shows the *Map from* item if the mapped history was created with product mapping or the name of the mapped history file if the mapped history was created by importing a mapped history file. If the forecast history has been set to zero, the field will read “Forecast History set to zero”.

The remaining two columns show the user who created the mapped history and when the mapped history was created.

To customize the display, open the **Settings** dialog from the hamburger menu or the context menu.

The **Settings** dialog lists the optional columns you may include in the Mapping Report. Last Updated and User are included by default. The remaining optional columns are:

Status: Displays the status.

Status Assigned By: Displays the user who assigned the status.

Status Assigned Date: Displays the date the status was assigned.

Last Viewed By: Displays the user who last viewed the item.

Last Viewed Date: Displays the date the item was last viewed.

Description: Displays the Description included for the *Map to* item in the historic data file.

Pareto: Includes four additional columns: Pareto, % of Total, Ranking and Cumulative %. Consult The Pareto Tab for more information.

Comments (Y/N): Displays a value of Yes or No to identify which items have item-level comments associated with them.

Comments: Displays the most recent comment.

Date Range*:* Includes the Start Date, End Date and Periods (total number of mapped periods) for the mapped history defined in the *Map from* column.

Volume: Displays the total unit volume for the mapped history across all mapped periods.

% Allocation: Displays the percentage of the *Map From* item's history used to create the mapped history.
