

What's New in Forecast Pro TRAC V8.3

Simplified Override Mode

A new single-row override method lets you make adjustments that instantly update across your forecasting hierarchy. This streamlined approach eliminates complex override sets and makes changes easier to manage.

Enhanced change tracking provides at-a-glance visibility, detailed logs, full transaction reporting, and forecast locking for better control and transparency.

[Learn More](#)

Improved Collaboration

Child projects can now shuffle hierarchies and work with conversions, removing previous workflow limitations.

Faster Machine Learning

Smarter model selection and performance improvements — averaging up to 8× faster on large projects.

Modernized User Interface

The Override Grid has been refreshed with a modern interface designed for greater usability and clarity. With an Excel-style grid, familiar indicators, and an updated color palette, managing overrides is now more intuitive and easier to navigate.

Better Handling of Transactional Data

Transactions for the same item and date are automatically aggregated in historical data, preventing duplicate-row errors and simplifying transactional data imports especially when multiple orders occur within the same period.
